

FOR RURAL / FARM GATES

Our simple to install kits suit mesh or bar gates.

Change your existing or new, round steel pipe frame gates into Bump Gates. Use gates 3-4.8 metres wide (10-16 feet).

SIZES & MODELS

Kits are available for Aust. standard size gates with frames of 33mm OD (1¼"). In addition we supply kits for gates made from 42mm OD (1½") and 50mm OD (2") round pipe.

There is also a heavy duty model in each size for frequent use by 4WD's and light trucks.

Different kits are supplied for installation onto timber, steel or masonry hinge posts.

WARNING: A Bump Gate is not for use by large trucks or heavy vehicles. Use the Delay catch tail to hook open your Bump Gate for these vehicles.

INSTALLATION

The Do-it-yourself kits require basic skills and are designed for a handyperson to install.

The plain English fitting instructions have photos of each step and installation advice is readily available from our service-oriented team.

If you don't have time to do the installation yourself, contact a **reputable** fencing contractor.

AVAILABILITY & FREIGHT

Bump Gate kits are manufactured in Queensland and are despatched daily via Australia Post or Fastway Couriers. Delivery within Australia is 2 - 7 days from despatch. Kit cartons measure 1.1 x 0.5 m and weigh 16-20kg.

Kits are sold at rural supply outlets throughout Australia (check our website for your nearest Agent), by mail/phone order, or through secure online payment facilities at www.bumpgates.com

International orders are sent Air Freight direct to your postal address and are received within 14-21 days from despatch.

BENEFITS OF BUMP GATES

A Bump Gate is **easy and convenient to use** and **saves you time**. Just slow down to 2 kph, gently bump your gate and drive through; it closes behind you automatically.

Bump Gates are the most cost-effective gate opener/closer available, selling for a fraction of the real cost of a cattle grid/guard or electronic system.

Each Bump Gate you install saves your family or business a **minimum** of 200 litres / 44 gallons of fuel **per year**, as you no longer stop to open and close gates by hand.

Operating by mechanical power and gravity, Bump Gates are **low maintenance and reliable** with a **two year parts warranty worldwide**. They work in temperatures -50° to $+50^{\circ}\text{C}$.

As a Bump Gate is always closed, **your property security improves**. The problem of visitors leaving gates open is also solved.

Bump Gates **keep your animals in** and they are **safer** for livestock **than cattle grids / guards**.

Personal safety is increased with a Bump Gate. No-one has to get out of the car at any time which reduces the risk of accidents.

A Bump Gate **keeps young children away from roads and traffic**, making play areas safer and giving you peace of mind.

Bump the rubber-sleeved arms with small cars to light trucks, while on horseback, motorbike or on foot. You don't need a bull / bush bar and the arms will not activate airbags or damage your car.

The adjustable closing speed makes it easy to tow trailers, boats and horse floats through your Bump Gate. There are no costly accessories, electronics or hydraulics.

Our **60-day money back guarantee within Australia** means that if not completely satisfied with your Bump Gate, you can return your kit to receive a full refund.

WHAT CUSTOMERS SAY....

Absolutely fantastic. Saves you getting out of the car in any weather.

Chris Layh, Cooroy, QLD

The Bump Gate works great. I use it every day. Mark Royal, Ellaville Georgia USA

It's one of the best things we ever did. With two teenage daughters and their friends coming and going every day, our dogs were getting out. Now it's not a problem, the Bump Gate keeps our pets in and it gets a hell of a lot of use.

David Moore Alice Springs NT

Bump Gates are 'spot on'. They are 1/4 the cost of a solar gate and totally reliable. Grizz Adams, Falls Creek NSW

There is no problem driving tractors, motorbikes or 4-wheeler bikes through the Bump Gates. Livestock have not been able to open them. I recommend them highly.

Dr Hans Van Hennekeler, Mt Perry QLD

HOW BUMP GATES WORK

A Bump Gate swings in both directions.

1. Gently bump the rubber sleeved arm at $<2\text{kph}$, releasing the spring-loaded Lockpin.

2. Follow the gate as it starts to swing open.

3. While you're driving through, the Bump Gate is held open by a Delay catch fitted to a post at 120° from the gate's closed position.

4. Then the Delay Catch releases the gate so it swings closed behind you, with an adjustable closing speed.

5. When closed, your Bump Gate is held securely in a two-way lock.
